PixelCraft CRM: A Modern Dashboard

A comprehensive design exploration of a next-generation CRM dashboard built for sales teams, project managers, and startup founders who need unified visibility across leads, clients, and projects.

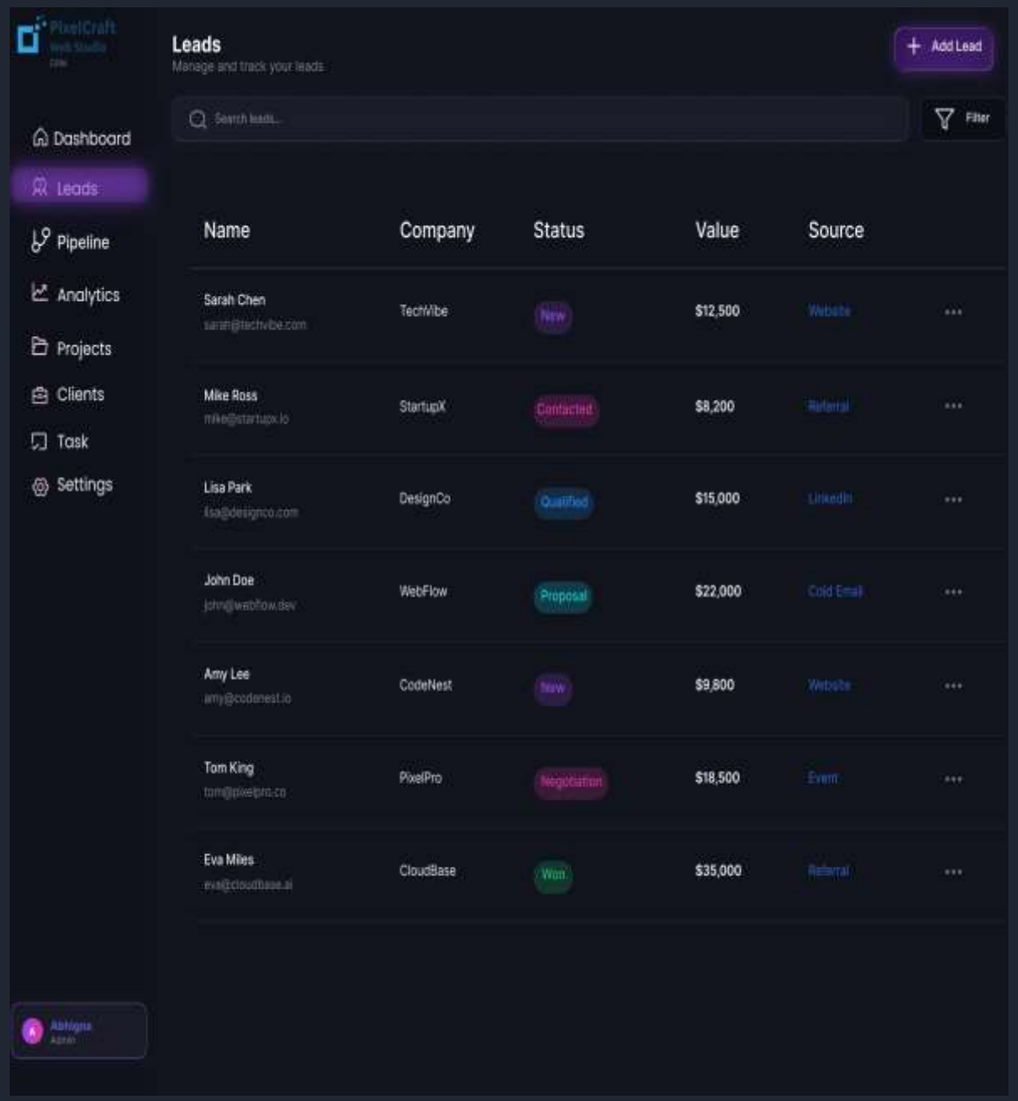
Dashboard Overview: The Command Center

Unified Business Intelligence

The dashboard serves as the central hub, providing instant visibility into critical metrics through strategically placed KPI cards: Total Leads, Active Clients, Running Projects, and Tasks Due. These metrics update in real-time, ensuring teams always work with current data.

Strategic Design Decisions

- Leads by Stage bar chart reveals pipeline health at a glance
- Sales Funnel visualization identifies conversion bottlenecks
- Quick action buttons reduce time-to-action for common tasks
- Horizontal scrolling accommodates growing pipeline complexity



Leads Management: Track Every Opportunity

Smart Search & Filter

Advanced filtering by status, value range, and source helps teams focus on high-priority leads instantly.

Status Tracking

Six distinct stages—New, Contacted, Qualified, Proposal, Negotiation, Won—provide clear progression visibility.

Value Intelligence

Lead value and source tracking enables prioritization based on revenue potential and channel effectiveness.

The leads table employs clean data hierarchy with zebra striping and hover states for improved readability. Status tags use color-coded badges that align with the sales pipeline stages, creating visual consistency across the application.

Pipeline Board: Visual Deal Tracking

Kanban-Style Workflow

Horizontal stages flow left-to-right: New → Contacted → Qualified → Proposal → Negotiation → Won. Each deal card displays name, company, monetary value, and priority tag for quick scanning.

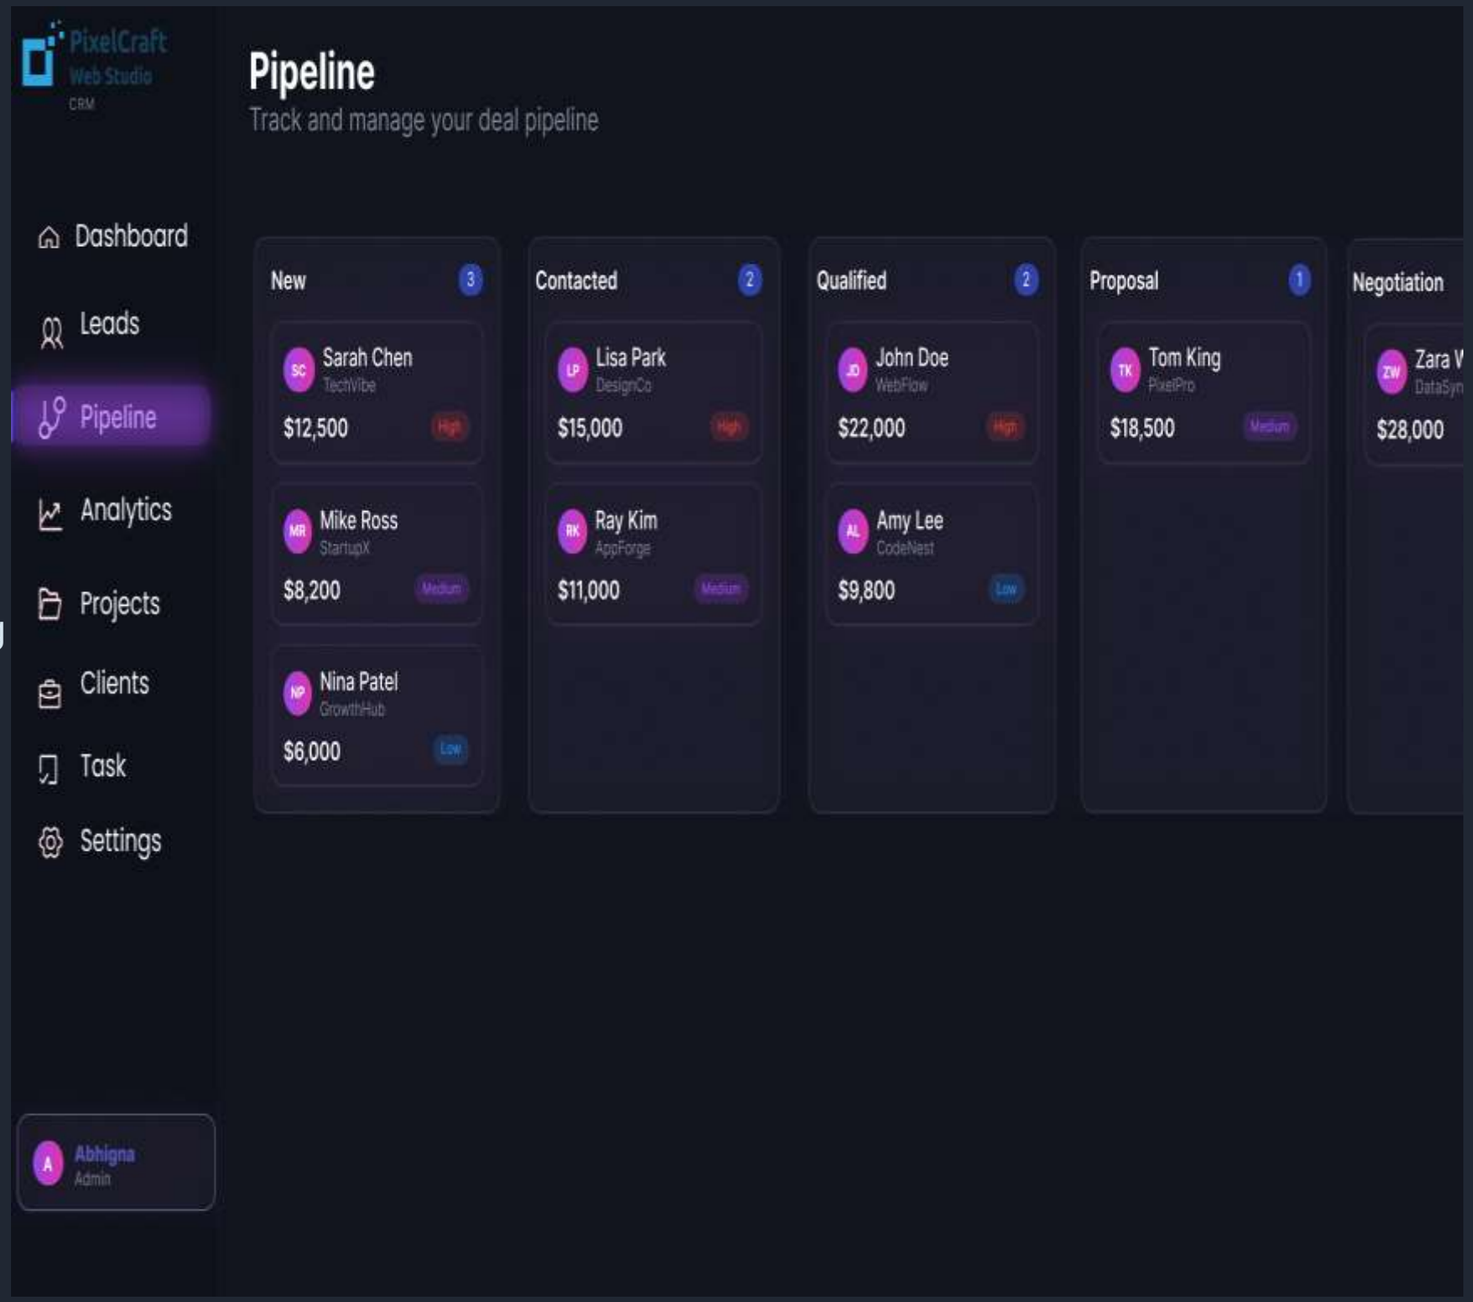
UX Considerations

Visual grouping reduces cognitive load when scanning 50+ deals

Horizontal scrolling prevents overwhelming users with too many columns

Color-coding by priority (Critical, High, Medium, Low) guides attention

Drag-and-drop reordering coming in Phase 2



Analytics Screen: Data-Driven Decisions

Monthly Revenue Trends

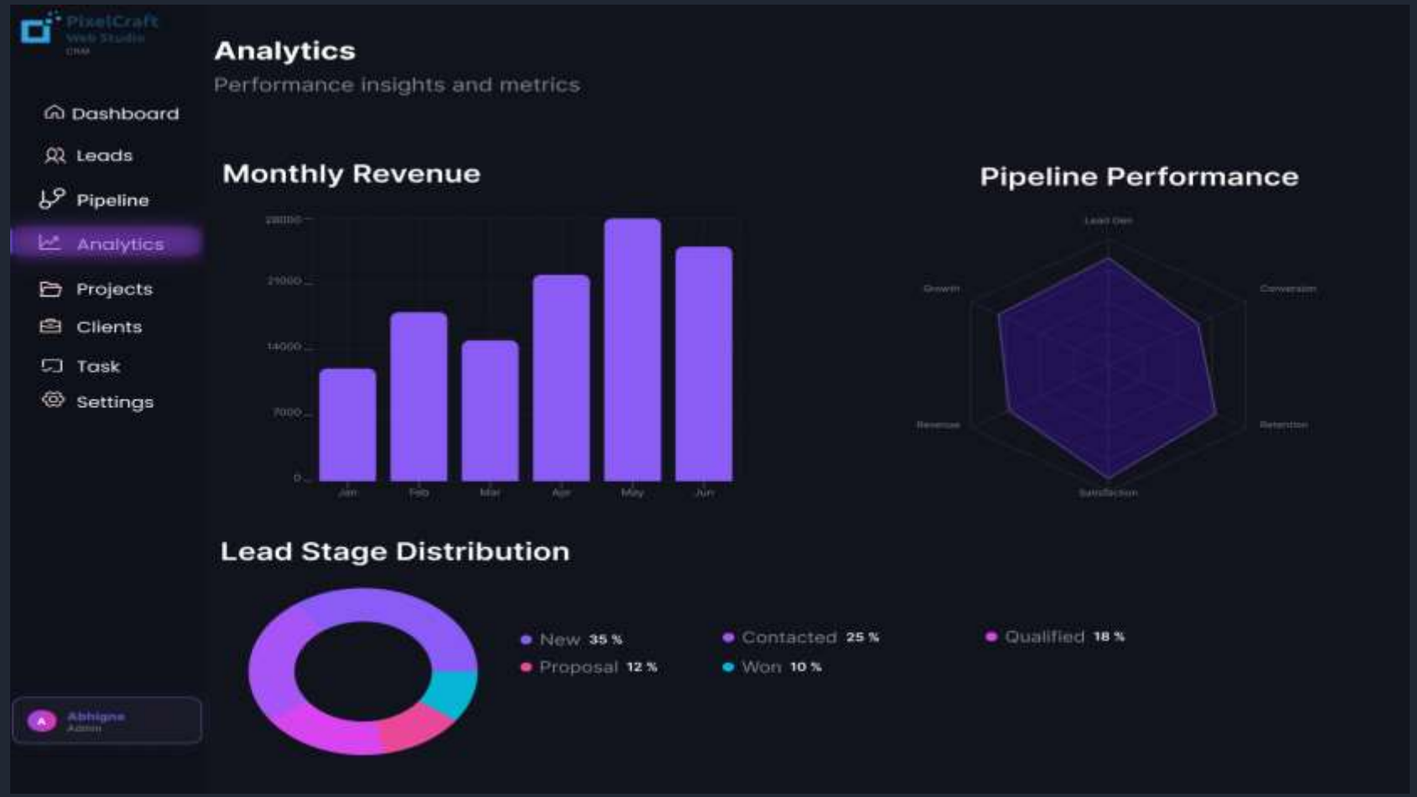
Bar chart reveals seasonal patterns and growth trajectories, helping forecast future performance.

Pipeline Performance

Radar chart visualizes conversion rates across each stage, identifying where deals stall or accelerate.

Stage Distribution

Donut chart shows lead concentration, revealing if pipeline needs more top-of-funnel or closing support.



The dark theme enhances data visibility by reducing glare during extended analysis sessions. Chart colors use the purple-blue gradient palette for brand consistency while maintaining accessibility through sufficient contrast ratios.

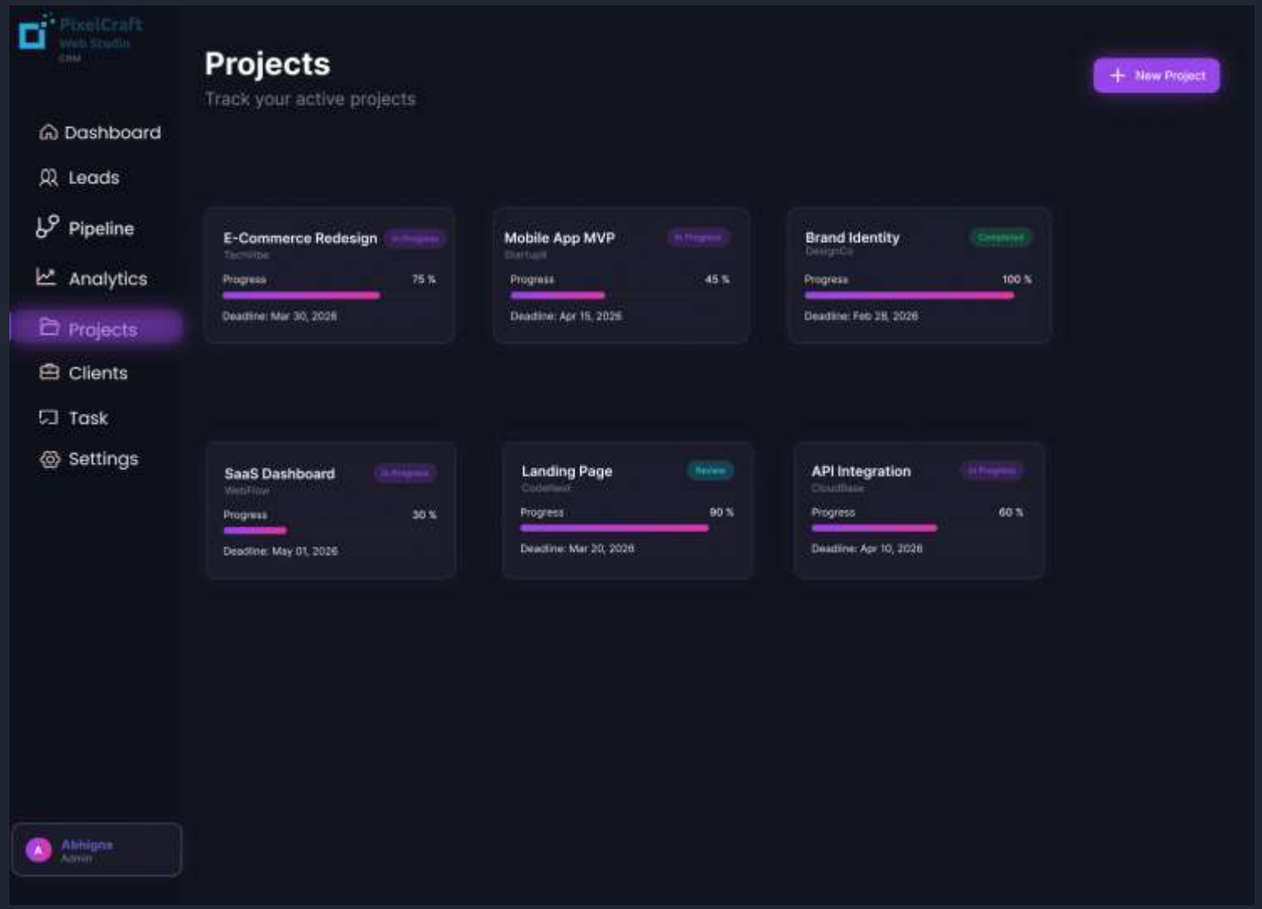
Projects Screen: Track Progress Visually

Card-Based Grid Layout

Projects display as cards with progress bars, status badges (In Progress, Review, Completed), and deadline visibility. This layout allows scanning 12+ projects simultaneously without overwhelming users.

Design Rationale

- Progress bars use gradient fill to indicate completion percentage
- Status badges employ color semantics (blue=In Progress, yellow=Review, green=Completed)
- Deadline visibility uses relative time ("Due tomorrow" vs "Feb 15") based on proximity
- New Project CTA button maintains consistent placement across all screens



Clients Screen: Relationship Management

1

Directory Table

Company, Contact Person, Active Projects, and Revenue columns provide at-a-glance overview of client portfolio health.

2

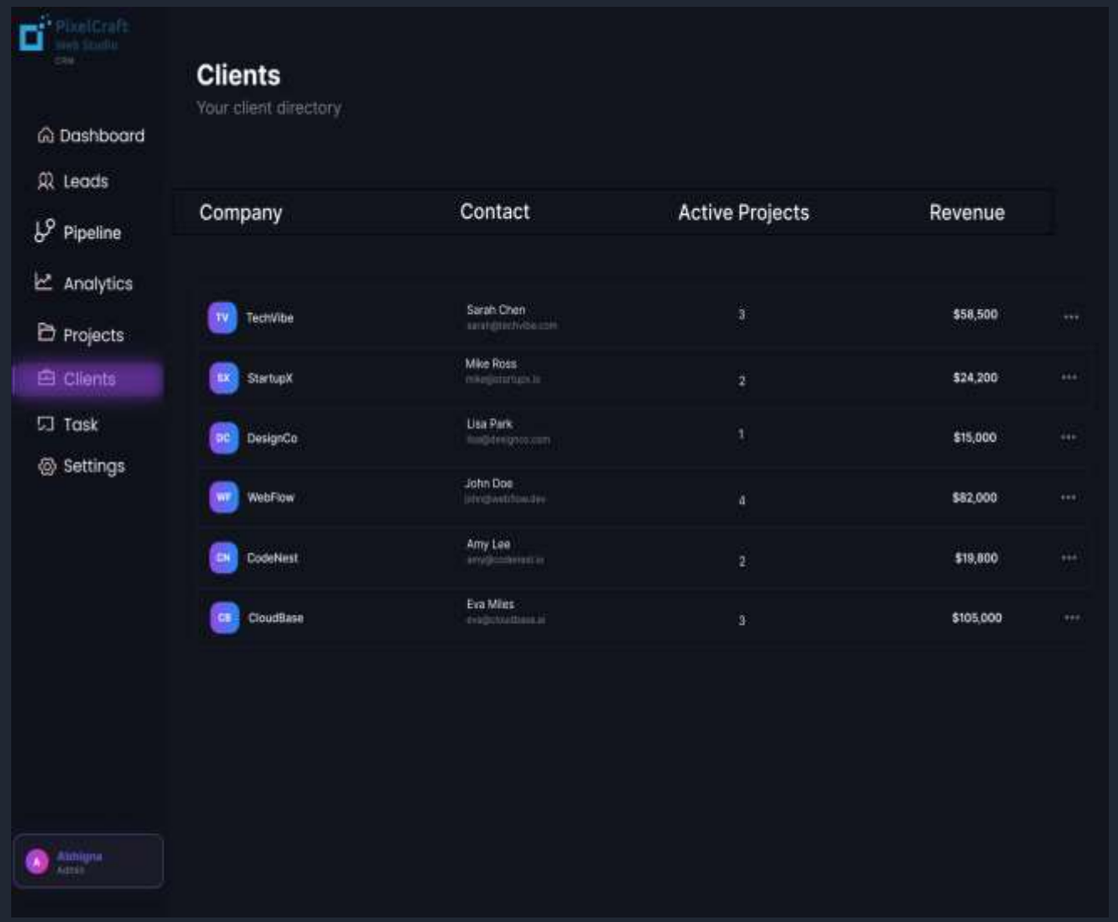
Detail Panel

Click interaction opens right-side drawer showing full contact info, revenue history, and linked projects for deeper context.

3

Linked Data

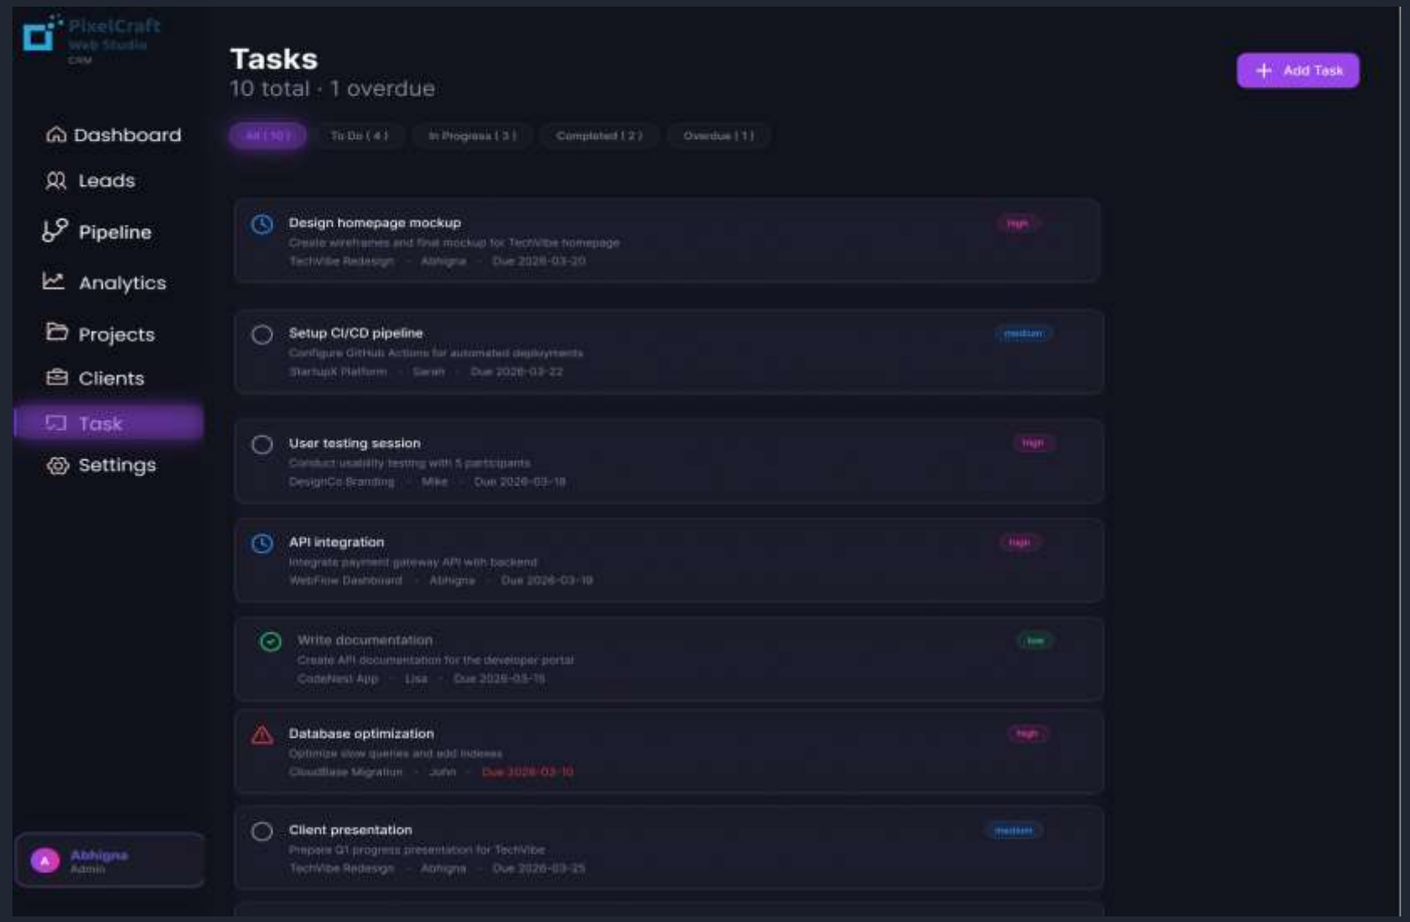
Relationship management UX connects clients to projects, tasks, and communications, preventing data silos across teams.



Tasks Screen: Productivity at Scale

Priority-Driven Organization

Filter tabs (All, To Do, In Progress, Completed, Overdue) let users segment workload by urgency. Each task shows description, assigned person, due date, and checkbox interaction for completion marking.

Interaction Design


Hover states reveal quick-action icons (edit, assign, delete)
Keyboard shortcuts (Enter to add, Esc to cancel) speed up data entry
Overdue tasks display red accent border to demand attention
Add Task button uses floating action design pattern for prominence
